SHABIR KHAN

Senior Full-Stack Engineer | TypeScript · Next.js · React · Node.js · NestJS · Rust · AI coding-agent tooling
Islamabad, Pakistan · Open to remote, hybrid and relocation · Full-time or contract · shabirkhan.rabtx.dev
shabirkhan.dev@gmail.com · +92 316 9375043 (WhatsApp) · linkedin.com/in/shabirkhan23 · github.com/shabirkhan-dev

SUMMARY

TypeScript-first senior full-stack engineer with 8+ years shipping production SaaS, APIs and React Native apps on Next.js, Node.js, NestJS and PostgreSQL, with Rust for performance-critical services. Currently leading frontend architecture on Auspira, a contract-management platform for a UK client, and building Grid, an open-source workspace where people and AI coding agents work on the same project. Previously led the frontend rebuild of BullseyeEngagement, a US HR platform used by PepsiCo, Intel and Emory University (35% faster key pages). Owns work end to end, from architecture and component systems to CI/CD, quality gates and AI-native workflows.

EXPERIENCE

Senior Frontend Lead (Contract) | Nexora AI Ltd — Aug 2026 – Present
Auspira: NEC contract-management SaaS for a UK client · Remote
- Lead Auspira's frontend architecture on Next.js 15 App Router, React 19, TanStack Query 5, Zustand, Ant Design 6 and Tailwind CSS v4.
- Moved the frontend from a monolith to a modular monolith with scoped feature modules and one reusable component layer, cutting duplicated code by over 50%; unified Ant Design and Tailwind theme tokens into one source.
- Made the app faster and smoother with code splitting, dependency cleanup and modern browser APIs.
- Built the CI/CD pipeline from commit to GitHub: commit-message, bundle-size and architecture-guardrail checks plus Biome lint and format run before every commit (Lefthook); unit and other tests run in CI before merge.
- Set up AI-native agentic development: agent rules, skills and MCP servers for the stack, clear project boundaries, and agent READMEs so AI coding agents work safely inside the codebase.

Founder & Lead Engineer | RabtX — Jul 2025 – Present
Product studio building developer tools and SaaS products · rabtx.dev · Remote
- **Grid** (grid.rabtx.dev · github.com/Rabtx/grid, public beta v0.1.0, MIT / Apache-2.0): a self-hosted workspace where people and AI coding agents (Claude Code, Codex, opencode, any ACP agent) share one project board, live agent threads, file editor, terminals and PR checks, from desktop or phone.
- Architected Grid as a monorepo: a SolidJS PWA console, a Hono + Drizzle + PostgreSQL API on Bun, and a Rust agent runner that streams agent events over WebSockets and stores session logs in SQLite, all behind one port. Own CI/CD, deployment and releases.

Frontend Engineer, Web & Mobile (Part-time Contract) | Kansai Group — May 2024 – Jun 2026
Osaka-based used-car exporter and auction specialist · Remote
- Built the React Native (Expo) mobile app, the Next.js vehicle listing site and the admin panel, with real-time inventory updates.
- Cut API payloads by 50% with lean per-screen responses, and built reconnect-and-resync handling so live inventory stayed correct after dropped connections.

Lead Frontend Engineer | Excelorithm LLC — May 2023 – Jul 2025
Client: BullseyeEngagement, US HR platform · Rawalpindi, Pakistan
- Led the frontend rebuild of BullseyeEngagement (customers include PepsiCo, Intel, Emory University), from legacy code to Next.js, React Query and Tailwind.
- Set the frontend architecture as a modular monolith with a shared component library and code-review standards.
- Improved key page loads by 35% (SSR/SSG, bundle tuning, caching) and reduced server load by 20% by redesigning client data access.

Senior Full-Stack Developer | Revoxai — Mar 2021 – May 2023
AI-powered e-learning startup · Remote
- Owned features end to end on an AI e-learning platform: Next.js and TypeScript frontend, Node.js/Express APIs, integration with the AI services, and deployment to production.
- Took responsibility for app security: found and fixed vulnerabilities across the web and mobile apps.

Freelance Software Developer | Fiverr & direct clients · Remote — Feb 2018 – Jan 2021
- Built web and mobile applications for clients with Node.js, Express, PostgreSQL and React; hardened endpoints with input validation and OWASP practices.

OPEN-SOURCE & PROJECTS

- **School OS** (github.com/Rabtx/school-os): multi-tenant school SaaS (Next.js, Expo, NestJS, PostgreSQL) with QR attendance, WhatsApp alerts to parents, and a Rust service that processes large volumes of school data.
- **Synone** (github.com/shabirkhan-dev/personal-os, in development): a personal OS mobile app that brings routines, money, food and habits into one place, with an AI assistant that answers questions and acts in real time.
- **Starter** (github.com/shabirkhan-dev/starter, MIT / Apache-2.0): production-ready SaaS monorepo (Bun + Turborepo): Next.js, Expo, NestJS, Fumadocs and FastAPI apps sharing one UI layer, TypeScript config and CI pipeline.

SKILLS

Languages: TypeScript, JavaScript, Rust, SQL, Bash
Frontend: React 19, Next.js (App Router), SolidJS, React Native / Expo, TanStack Query, Zustand, Tailwind CSS v4, Ant Design, shadcn/ui, design systems, web performance
Backend & Data: Node.js, NestJS, Express, Hono, Bun, REST APIs, WebSockets, PostgreSQL, MongoDB, Redis, SQLite, Drizzle, Prisma
DevOps & Quality: End-to-end CI/CD (build, test, release), Docker, GitHub Actions, AWS (EC2, Lambda, SES), self-hosting, Linux, Vitest, Biome, Lefthook, CodeQL, Dependabot, OWASP
AI: AI-native development (agent rules, skills, MCP servers), AI coding agents (ACP, Claude Code, Codex), LLM APIs, RAG, vector search, Ollama / local models

EDUCATION & LANGUAGES

ICS — Intermediate in Computer Science | GCCE Gilgit | 2021 · English (professional), Urdu (native)
